

## Secure Exchange Solutions Reports Rapid Growth in Demand for Integrated Secure Messaging

Rockville, MD, November 22, 2013 –Secure Exchange Solutions (SES) a Health Information Service Provider (HISP) leading the field of fully integrated Direct messaging solutions, reports significant growth in demand for its Direct messaging solutions by healthcare software vendors and health systems.

“EHR software developers and hospitals are looking to meet Direct messaging requirements for Meaningful Use Stage 2, while providing their users with an integrated secure messaging option for improvements in care coordination,” said Dan Kazzaz, CEO of Secure Exchange Solutions. “Our customers select SES for our ease of integration and rapid deployment, backed by our technical experience in secure health information exchange.”

SES was recently selected by Curaspan Health Group, iPatientCare, Inc., and WellSpan Health to provide Direct secure messaging solutions.

Curaspan, the leading provider of patient-transition solutions, developed a care-collaboration tool that leverages SES Direct secure e-mail. Using the secure pathway, real-time notifications are automatically sent to payers, hospitals and designated community-based providers when identified high readmission risk members are admitted and discharged from the hospital. “The timely, secure sharing of patient data enables payers and providers to proactively coordinate care to achieve positive patient outcomes and reduce avoidable readmissions,” says Charles Shelley, Senior Vice President of Sales and Marketing. “SES is essential to this program, as it allows us to send patient data securely and efficiently.”

New Jersey-based iPatientCare, Inc. is known as a pioneer in mHealth and cloud-based ambulatory Electronic Health Record (EHR) systems. iPatientCare selected SES to deliver a Direct messaging solution for the secure electronic communication of Patient Health Information. “We are proud to have Secure Exchange Solutions as our partner in implementing Direct messaging for all our customers across the country. In addition to security, reliability, and stability, we wanted a Direct solution that is easy to integrate and implement within the iPatientCare EHR. This ease of integration was offered only by SES Connect out of the top five HISP vendors,” said Shripal Shah, Sr. Technology Officer at iPatientCare.

WellSpan Health is a Pennsylvania-based healthcare system committed to providing high quality, coordinated care through its community-based approach. The WellSpan group includes 11,000 employees, four hospitals and numerous other patient care facilities. WellSpan’s integration of secure messaging into its sophisticated Patient Portal will support the Meaningful Use Stage 2 certification of WellSpan’s software, while reinforcing WellSpan’s collaborative approach to patient care.

### About Secure Exchange Solutions (SES)

Secure Exchange Solutions (SES) offers simple and scalable solutions for exchanging healthcare information in a way that is secure and cost effective. As a Health Information Service Provider (HISP) and a committed member of the Direct Project, SES helps healthcare stakeholders meet the requirements for Meaningful Use. SES products expedite healthcare communications, improve quality of care, optimize care transitions, and reduce reliance on costly and complex communications.
